You are invited to attend the Tensar Geogrid Seminar on November 16th from noon – 1:00pm in ECCE 1B52

SUBJECT:
Conventional construction practices are presenting new challenges to pavement engineers, contractors and owners due to the volatility of material costs and their availability. Over the last 20 years, Tensar Geogrids have been utilized in soft soil applications and in paved road applications as an alternative to conventional construction practices. Come and learn about the background and research of geogrid technology, design tools, specific projects and the latest innovation in geogrid technology, TriAx.
