Homework Assignment 11 (Due Wednesday May 3, 2006)

1) After selecting a value for the radius R of the reference sphere, use equation (5) to construct your own polar equal angle net by considering a series of cones centered at O with dip angle $\psi = 90^\circ$, and half-apex angles $\phi$ ranging between 0 and $90^\circ$ with $10^\circ$ increments. Radial lines centered at O are then constructed with $10^\circ$ increments.

2) After selecting a value for the radius R of the reference sphere, construct an equatorial equal angle net showing great and small circles with $10^\circ$ increments.
