

CDPS GENERAL PERMIT
DOMESTIC WASTEWATER TREATMENT FACILITIES

DISCHARGING TO RECEIVING WATERS THAT ARE:

UNCLASSIFIED; OR USE PROTECTED; OR ARE DESIGNATED
AS THREATENED AND ENDANGERED SPECIES HABITAT

AUTHORIZATION TO DISCHARGE UNDER THE
COLORADO DISCHARGE PERMIT SYSTEM (CDPS)

In compliance with the provisions of the Colorado Water Quality Control Act (25-8-101 et. seq. CRS, 1973 as amended), and the Federal Water Pollution Control Act (33 U.S.C. 1251 et. seq. as amended; the "Act"), domestic wastewater treatment facilities are authorized to discharge from approved locations throughout the state of Colorado to waters of the State which are unclassified or designated Use Protected or designated as threatened and endangered species habitat. Such discharges shall be in accordance with effluent limitations, monitoring requirements and other conditions set forth in Parts I, II, and III hereof.

This permit specifically authorizes the entity identified in the certification on page one of this permit to discharge from their wastewater treatment facilities, at the location described on page one of this permit, to waters of the state as identified on page one of this permit.

The authorization to discharge under this permit is in effect from the date of certification identified on page one of this permit until the expiration date identified below.

This amended permit becomes effective on **October 1, 2008** and shall expire at midnight, October 31, 2010.

Amended and Issued this 27th day of August, 2008

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT

Janet Kieler, Permits Section Manager
Water Quality Control Division

Permit Action Summary:

Amended August 27, 2008 Effective: October 1, 2008
Originally Issued and Effective: November 1, 2005

PART I

A. COVERAGE UNDER THIS PERMIT

1. Eligibility

In order to be eligible for authorization to discharge under the terms and conditions of this permit, the owner of any domestic treatment facility that can meet the conditions identified at Part I.A.3., below, must submit a complete permit application form obtained from the Water Quality Control Division ("Division"). Such application shall be submitted at least sixty (60) days prior to the anticipated date of first discharge to:

Colorado Department of Public Health and Environment
Water Quality Control Division, WQCD-P-B2
4300 Cherry Creek Drive South
Denver, Colorado 80246-1530
Attention: Permits Unit

The application form can be obtained from the Division from our website at:
<http://www.cdphe.state.co.us/wq/PermitsUnit/Domestic/index.html> , or by calling 303-692-3599.

The Division shall have up to sixty (60) days after receipt of the application to request additional data and/or deny the authorization for any particular discharge. Upon receipt of additional information the Division shall have an additional 60 days to issue or deny authorization for any particular discharge.

Authorization to discharge shall be site specific and not transferable to alternative locations. If the Division determines that the operation does not fall under the authority of the general permit, then the information received will be treated as an individual permit application.

Authorization to discharge under this general permit shall commence immediately and shall expire on October 31, 2010. The Division must evaluate this general permit once every five (5) years and must also recertify the applicant's authority to discharge under the general permit at such time. Therefore, a permittee desiring continued coverage under this general permit must re-apply by April 30, 2010. The Division will determine if the applicant is eligible to continue to operate under the terms of the general permit. An application for an individual permit will be required for any facility not reauthorized to discharge under the reissued general permit.

2. Certification Requirements

The applicant must certify or the Division must find that the following conditions exist at the facility or the facility will not be allowed to discharge under the authority of this general permit:

- a. The facility is a domestic wastewater treatment facility discharging to at least one of the following: 1) an unclassified water; 2) a use protected water; or 3) a water that has been designated as threatened and endangered species habitat (including an area within the associated 100-year flood plain).
- b. The discharge to an unclassified water must not return flow to a classified water, that has an Undesignated or Outstanding Water designation.
- c. The hydraulic design capacity of the facility is less than one million gallons per day (1 MGD).
- d. The facility is not required to develop an industrial pretreatment program pursuant to either Section 307 of the Act or Section 63.9.A.(2) of the Colorado Pretreatment Regulations.
- e. The facility does not accept for treatment and discharge, by truck, rail, or dedicated pipeline, any hazardous waste as defined at 40 CFR Part 261, 6 CCR 1007-3.
- f. Except in accordance with an approved total maximum daily load, the discharge cannot be shown to be capable of causing new or increased loadings of parameters with quantitative effluent limits under this general permit for any downstream state waters which are listed in Regulation No. 93 as impaired.

3. Threatened and Endangered Species

If the discharge does go directly to a stream (including an area within the associated 100-year flood plain) that is designated as threatened or endangered habitat for fish by the U.S. Fish and Wildlife Service, then the effluent limitations associated with discharges to threatened and endangered species habitat will apply. Information on those designated waters is available on the Division's website.

4. Mixing Zone

There is no presumption of mixing zones under this general permit. Thus, pursuant to Section 31.10 of The Basic Standards and Methodologies for Surface Water, a mixing zone determination is required for this permitting action. Exclusion from further mixing zone determinations, based on Extreme Mixing Ratios, may be granted if the ratio of the design flow to the chronic low flow (30E3) is greater than 2:1 or if the ratio of the chronic low flow to the design flow is greater than 20:1. The certification will specify whether the extreme mixing ratio has been met based on the calculated dilution ratio.

If the Extreme Mixing Ratio has been met, no additional requirements will be prescribed in the certification. If the Extreme Mixing Zone Ratio has not been met, a compliance schedule will be prescribed in certification in accordance with Part I.B.6. of the permit to obtain the necessary information, which will be used to complete the testing of exclusion thresholds before the next permit renewal.

For discharges to waters designated as threatened or endangered species habitat, mixing zone considerations will be denied, unless a Division approved diffuser is installed, in which case mixing at the approved dilution ratio shall be granted. In the absence of a mixing allowance, effluent limitations will be set equal to the water quality standards.

Mixing zones evaluations will not apply to unclassified waters, where flow does not return to a classified water.

5. Antidegradation

Pursuant to Section 31.8(2)(b) of The Basic Standards and Methodologies for Surface Water, waters designated by the Commission as being Use Protected do not warrant the special protection provided by the antidegradation process. Thus, for discharges to "Use Protected" waters, Section 31.8(2)(b) is met and no further antidegradation evaluation is necessary.

Pursuant to Section 31.8(3)(a), antidegradation review procedures apply to "...regulated activities with new or increased water quality impacts that may degrade the quality of state surface waters..." For discharges that go directly to unclassified waters (e.g., ditch) and which would not impact downstream classified waters, water quality impacts would not occur because limitations based upon the water quality standards would not be applied. Thus, no additional antidegradation requirements are designated for discharges to Unclassified Waters.

Discharges to T&E waters that are not designated as Use Protected or have a chronic low flow to design flow ratio of 100:1 or greater are subject to an antidegradation review. For the purposes of this general permit, the antidegradation limitations will be applied as 15% of the standard, as the presumption for discharge to a T&E water is an end of pipe limitation based upon the standard. This is due to the denial of a mixing zone in a T&E water. If the permittee would like to determine the antidegradation limitations based upon the baseline water quality, as outlined in the antidegradation guidance document, an individual permit will be necessary.

B. TERMS AND CONDITIONS

1. Service Area

The service area for this treatment facility is delineated in the certification. All wastewater flows contributed within this service area may be accepted for treatment by the permittee provided that such acceptance does not exceed the throughput or design capacity of the treatment works or constitute a substantial impact to the functioning of the treatment works, the quality of the receiving waters, human health, or the environment.

In addition, the permittee shall enter into and maintain service agreements with any entities outside of the identified service area whose wastewater is received at the wastewater treatment facility. The service agreements shall contain all provisions necessary to protect the financial, physical, and operational integrity of the complete wastewater treatment works, including appurtenances.

2. Design Capacity

The 30-day average design hydraulic and organic capacities for this domestic wastewater treatment works are established in the certification and shall be binding for the purposes of determining compliance with the requirements described in the following paragraph, number 3.

3. Expansion Requirements

Pursuant to Colorado Law, C.R.S. 25 8 501 (5 d & e), the permittee is required to initiate engineering and financial planning for expansion of the domestic wastewater treatment works whenever throughput and treatment reaches eighty (80) percent of the 30-day average design capacity as identified in the certification. Whenever ninety five (95) percent of the 30-day average design capacity as identified in the certification for throughput and treatment is met, the permittee shall commence construction of the necessary treatment expansion.

In the case of a domestic wastewater treatment works, which treats wastewater from users under the permittee's jurisdiction, where construction is not commenced in accordance with the above paragraph, the permittee shall cease issuance of building permits within the service area until construction has commenced. If the permittee's domestic wastewater treatment works serves other municipalities or connector districts, the permittee shall have made provisions by contract or otherwise, for the municipalities within the service area to cease issuance of taps or building permits within such service area until construction has commenced. Taps or building permits may continue to be issued for any construction, which would not have the effect of increasing the flow or organic loading of wastewater to the wastewater treatment works that is the subject of this permit.

If, during the previous calendar year, the monthly hydraulic loading (MGD) or organic loading (lbs. BOD5/day) to the facility in the maximum month exceeded either 80% or 95% of the hydraulic or organic capacity discussed in Part I.B.2. of this permit and identified in the certification for this permit, the permittee shall submit a report by March 31 the following year that includes:

- a. A schedule for planning for a facility expansion if 80% of the hydraulic or organic capacity was exceeded; or
- b. A schedule for construction of a facility expansion if 95% of the hydraulic or organic capacity was exceeded; or
- c. An analysis that indicates that the exceedance of the applicable percentage of the hydraulic or organic capacity (80% or 95%) was an anomaly and is not expected to occur during the current calendar year.

If the permittee has reason to believe that the peak flow in any major interceptor or lift station is expected to cause an overflow from the interceptor or lift station during the current calendar year, the permittee shall submit a report within 30 days of such finding that includes a schedule of actions to be taken immediately that will prevent any overflow to state waters.

4. Facilities Operation

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances; including lift stations and the collection system owned by the permittee) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes compliance with a plan of operation for the domestic wastewater treatment works, if such a plan has been prepared, that contains provisions for effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision also requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit. Any biosolids produced at the wastewater treatment facility shall be disposed of in accordance with State and Federal guidelines and regulations.

5. Change In Conditions

Any change to the treatment facility, or to the wastewater it receives, which results in an inability to meet any condition identified in the "Certification Requirements" at Part I.A.3., above, must be reported to the Division within ten (10) working days of the date the permittee becomes aware of such change. The Division will require the permittee to apply for and obtain an individual permit if it determines that the facility no longer qualifies for authorization to discharge under the general permit.

6. Compliance Schedules

If necessary, any compliance schedule items will be noted in the certification to discharge.

7. Effluent Limitations

a. DISCHARGES TO UNCLASSIFIED WATERS ONLY

The following effluent limitations will apply to discharges to unclassified waters, where there is no return flow to a classified water of the state. For discharges where return flow to a classified state water is possible, and that receiving stream is Use Protected, the limitations under Part I.B.7.b will apply. For discharges where return flow to a classified state water is possible, and that receiving stream is a T&E water, the limitations under Part I.B.7.c will apply. Where return flow is possible to an Undesignated or Outstanding Water, the discharge will not be eligible for coverage under this general permit.

In accordance with the Water Quality Control Commission Regulations for Effluent Limitations, Section 62.4, and the Colorado Discharge Permit System Regulations, Section 61.8(2), the permitted discharge shall not contain effluent parameter concentrations, which exceed the following limitations:

Parameter	Limitation		
	30-day Avg.	7-day Avg.	Daily Max
Flow, MGD	¹	NA	Report
BOD ₅ , mg/l ²	30	45	NA
BOD ₅ , percent removal ⁵	NA	NA	85% (minimum)
Total Suspended Solids, mg/l			
Mechanical Plants	30	45	NA
Aerated Lagoons	75	110	NA
Non-aerated Lagoons	105	160	NA
TSS, percent removal ⁵			
Mechanical Plants only	NA	NA	85% (minimum)
Total Residual Chlorine, mg/l	Report	NA	0.5 ³
pH, s.u.	NA	NA	6.0-9.0
Oil and Grease, mg/l	NA	NA	10
E. Coli, no/100 ml	2,000	4,000	NA
Total Dissolved Solids, mg/l ⁴	Report ⁴	Report ⁴	NA

- ¹ The 30-day average effluent limitation for flow is identified in the certification and is enforceable under this permit.
- ² Limitations for 5-day Carbonaceous Biochemical Oxygen Demand (CBOD₅) of 25 mg/l (30-day average) and 40 mg/l (maximum 7-day average) may be substituted for the limits for BOD₅ as identified in the certification.
- ³ The total residual chlorine limit may be waived for discharges to irrigation ditches, and “Report” may be specified in lieu of the 0.5 mg/l daily maximum limit.
- ⁴ “Report”, only, requirements may be established for total dissolved solids in accordance with Colorado Regulation No. 39 for facilities ultimately discharging to the Colorado River basin. The reporting requirements, where applicable, will be discussed in the certification for this permit and are fully enforceable under this permit.
- ⁵ In addition to the concentration limitations for BOD₅ and Total Suspended Solids (TSS) indicated above, unless this provision has been specifically waived in the certification, the arithmetic mean of the BOD₅, or CBOD₅ if identified in the certification, and TSS concentrations for effluent samples collected during the calendar month shall demonstrate a minimum of eighty-five percent (85%) removal of BOD₅, or CBOD₅, and TSS, as measured by dividing the respective difference between the mean influent and effluent concentrations for the calendar month by the respective mean influent concentration for the calendar month, and multiplying the quotient by 100.
Where the permittee has demonstrated that the treatment facility is unable to meet the 85 percent removal requirement for a parameter and the inability to meet the requirement is not caused by excessive infiltration, as

defined in 40-CFR 35.2005(b)(16), a lower percent removal requirement or a mass loading limit may be substituted provided that the permittee can demonstrate that the provisions of 40 CFR 133.103(d) can be met.

Note that the TSS percent removal does not apply to lagoon facilities.

b. DISCHARGES TO RECEIVING WATERS DESIGNATED USE PROTECTED WITH AQUATIC LIFE USES

The following effluent limitations will apply to minor domestic facilities only if so identified in the certification of this permit. If the discharge is to a T&E designated water, the limitations in Part I.B.7.c will apply.

In accordance with the Water Quality Control Commission Regulations for Effluent Limitations, Section 62.4, and the Colorado Discharge Permit System Regulations, Section 61.8(2), the permitted discharge shall not contain effluent parameter concentrations, which exceed the following limitations:

Parameter	Limitation		
	30-day Avg. ^{i ii iii}	7-day Avg. ^{i ii iii}	Daily Max ^{i ii iii}
Flow, MGD	¹	NA	Report
BOD ₅ , mg/l ²	30	45	NA
BOD ₅ , percent removal ³	NA	NA	85% (minimum)
Total Suspended Solids, mg/l			
Mechanical Plants	30	45	
Aerated Lagoons	75	110	
Non-aerated Lagoons	105	160	
TSS, percent removal ³			
Mechanical Plants only	NA	NA	85% (minimum)
Total Residual Chlorine, mg/l	⁴	NA	⁴
pH, s.u.	NA	NA	6.5-9.0
Oil and Grease, mg/l	NA	NA	10
E. Coli, no/100 ml ⁵	⁵	⁵	NA
Total Ammonia, mg/l as N	⁶	NA	⁶
Total Inorganic Nitrogen, mg/l	Report ⁷	NA	⁷
Total Phosphorous, mg/l	⁸	NA	Report ⁸
Total Phosphorous, lbs/month	Report ⁸	NA	NA
Total Phosphorous, cumulative lbs/previous 12 consecutive months	⁸	NA	NA
Total Dissolved Solids, mg/l	Report ⁹	NA	Report ⁹
Other Pollutants, units	Report ⁹¹	NA	Report ⁹¹

¹ The 30-day average effluent limitation for flow is identified in the certification and is enforceable under this permit.

² Limitations for 5-day Carbonaceous Biochemical Oxygen Demand (CBOD₅) of 25 mg/l (30-day average) and 40 mg/l (maximum 7-day average) may be substituted for the limits for BOD₅ as identified in the certification.

³ In addition to the concentration limitations for BOD₅ and Total Suspended Solids (TSS) indicated above, unless this provision has been specifically waived in the certification, the arithmetic mean of the BOD₅, or CBOD₅ if identified in the certification, and TSS concentrations for effluent samples collected during the calendar month shall demonstrate a minimum of eighty-five percent (85%) removal of BOD₅, or CBOD₅, and TSS, as measured by dividing the respective difference between the mean influent and effluent concentrations for the calendar month by the respective mean influent concentration for the calendar month, and multiplying the quotient by 100.

Where the permittee has demonstrated that the treatment facility is unable to meet the 85 percent removal requirement for a parameter and the inability to meet the requirement is not caused by excessive infiltration, as defined in 40-CFR 35.2005(b)(16), a lower percent removal requirement or a mass loading limit may be substituted provided that the permittee can demonstrate that the provisions of 40 CFR 133.103(d) can be met. Note that the TSS percent removal does not apply to lagoon facilities.

⁴ Limits for total residual chlorine will be based on the Effluent Limitations by Dilution Ratio contained in Tables A and B. The limits will be identified in the certification and will be fully enforceable under this permit.

- 5 Limits for E. Coli will be determined based on the Effluent Limitations by Dilution Ratio contained in Tables G, H, and I. Note that the 7-day average limitation is calculated as 2x the 30-day average calculation. The limits will identified in the certification and will be fully enforceable under this permit.
- 6 Limits for total ammonia have been calculated with the AMMTOX model and will be based on Effluent Limitations by Dilution Ratio contained in Tables C, D, E, and F. The effluent total ammonia limits and/or reporting requirements will be identified in the certification for this permit and the limits and reporting requirements are fully enforceable under this permit.
- 7 A Total Inorganic Nitrogen limit will be calculated based on the methodology summarized in the rationale to this permit and imposed only where the certification indicates a limit or monitoring is necessary; otherwise, the certification will indicate that neither a limit nor reporting requirements will be specified. The Total Inorganic Nitrogen limit and/or reporting requirements, where applied, will be fully enforceable under this permit.
- 8 Total Phosphorous limits will be established where applicable and will be based on Colorado Regulation Nos. 71-74. The limits and reporting requirements, where applicable, will be fully enforceable under this permit.
- 9 “Report”, only, requirements may be established for total dissolved solids in accordance with Colorado Regulation No. 39 for facilities discharging to the Colorado River basin. Additionally, “Report” only requirements may be established for other pollutants that are not limited in this permit based on findings that the pollutants are listed along with the facility’s receiving stream in Colorado Regulation Nos. 93 and/or 94. The reporting requirements, where applicable, will be discussed in the certification for this permit and are fully enforceable under this permit.
- i. Modified Limitations for Discharges to 303(d) Listed Segments
- Limitations for pH, fecal coliform, E. coli and total inorganic nitrogen/nitrate, or any other applicable parameter may be added or modified by incorporating limits based on the wasteload allocation for the discharge as set forth in an approved total maximum daily load for the segment, and as identified in the certification. In the absence of an approved total maximum daily load, limits may be established at the water quality standard as identified in the certification. These modified limits will be fully enforceable under this permit.
- ii Site-specific limitations
- Site-specific limitations for a parameter may be added on a case-by-case basis that are equivalent to the Basic Standards and Methodologies for Surface Water, or Regulation for Effluent Limitations, or any other applicable regulation, and would be specified in the certification along with the appropriate monitoring frequencies.
- iii Other Site-specific Permit Conditions
- Specific permit conditions may be applied for compliance with any Division compliance order on consent, cease and desist order, or an EPA administrative order, or similar decree promulgated by the Division, EPA or any other public entity.

Table A: Acute (Daily Maximum) Total Residual Chlorine Effluent Limitations (mg/l) by Dilution Ratio

		Dilution Ratio (Low Flow : Design Capacity)											
		0:1	1:1	2:1	3:1	4:1	5:1	10:1	20:1	40:1	50:1	75:1	100:1

	0.014	0.019	0.024	0.029	0.034	0.039	0.044	0.069	0.119	0.219	0.269	0.394	0.5*
	0.015	0.019	0.023	0.027	0.031	0.035	0.039	0.059	0.099	0.179	0.219	0.319	0.419
	0.016	0.019	0.022	0.025	0.028	0.031	0.034	0.049	0.079	0.139	0.169	0.244	0.319
	0.017	0.019	0.021	0.023	0.025	0.027	0.029	0.039	0.059	0.099	0.119	0.169	0.219
	0.018	0.019	0.020	0.021	0.022	0.023	0.024	0.029	0.039	0.059	0.069	0.094	0.119
0.019	0.019	0.019	0.019	0.019	0.019	0.019	0.019	0.019	0.019	0.019	0.019	0.019	

* These limitations were calculated to be greater than 0.5 mg/l, however, as 0.5 mg/l is the technology based limit in Regulation 62, and would be more stringent than the calculated WQBEL, the 0.5 mg/l limit would be applied in the permit. The limitation is therefore capped at 0.5 mg/l.

Table B: Chronic (30-Day Average) Total Residual Chlorine Effluent Limitations (mg/l) by Dilution Ratio

* These limitations were calculated to be greater than 0.5 mg/l, however, as 0.5 mg/l is the technology based limit in Regulation 62, and would be more stringent than the calculated WQBEL, the 0.5 mg/l limit would be applied in the permit. The limitation is therefore capped at 0.5 mg/l.

c. DISCHARGES TO RECEIVING WATERS LISTED AS THREATENED OR ENDANGERED SPECIES HABITAT

The following effluent limitations will apply to minor domestic facilities discharging to T&E species habitat including the 100 year flood plains. Note that if the permittee opts to install a Division approved diffuser system, the limitations will default to those in Part I.B.7.b, for the appropriate approved dilution ratio.

In accordance with the Water Quality Control Commission Regulations for Effluent Limitations, Section 62.4, and the Colorado Discharge Permit System Regulations, Section 61.8(2), the permitted discharge shall not contain effluent parameter concentrations, which exceed the following limitations:

Parameter	Limitation		
	30-day Avg. ^{i ii iii}	7-day Avg. ^{i ii iii}	Daily Max ^{i ii iii}
Flow, MGD	¹	NA	Report
BOD ₅ , mg/l ²	30	45	NA
BOD ₅ , percent removal ³	NA	NA	85% (minimum)
Total Suspended Solids, mg/l			
Mechanical Plants	30	45	NA
Aerated Lagoons	75	110	NA
Non-aerated Lagoons	105	160	NA
TSS, percent removal ³			
Mechanical Plants only	NA	NA	85% (minimum)
Total Residual Chlorine, mg/l	0.011	NA	0.019
pH, s.u.	NA	NA	6.5-9.0
Oil and Grease, mg/l	NA	NA	10
E. Coli, no/100 ml	⁴	⁴	NA
Total Ammonia, mg/l as N	⁵	NA	⁵
Total Inorganic Nitrogen, mg/l	Report ⁶	NA	⁶
Total Phosphorous, mg/l	⁷	NA	Report ⁷
Total Phosphorous, lbs/month	Report ⁷	NA	NA
Total Phosphorous, cumulative lbs/previous 12 consecutive months	⁷	NA	NA
Total Dissolved Solids, mg/l	Report ⁸	NA	Report ⁸
Other Pollutants, units	Report ⁸ⁱ	NA	Report ⁸ⁱ

¹ The 30-day average effluent limitation for flow is identified in the certification and is enforceable under this permit.

² Limitations for 5-day Carbonaceous Biochemical Oxygen Demand (CBOD₅) of 25 mg/l (30-day average) and 40 mg/l (maximum 7-day average) may be substituted for the limits for BOD₅ as identified in the certification.

³ In addition to the concentration limitations for BOD₅ and Total Suspended Solids (TSS) indicated above, unless this provision has been specifically waived in the certification, the arithmetic mean of the BOD₅, or CBOD₅ if identified in the certification, and TSS concentrations for effluent samples collected during the calendar month shall demonstrate a minimum of eighty-five percent (85%) removal of BOD₅, or CBOD₅, and TSS, as measured by dividing the respective difference between the mean influent and effluent concentrations for the calendar month by the respective mean influent concentration for the calendar month, and multiplying the quotient by 100.

Where the permittee has demonstrated that the treatment facility is unable to meet the 85 percent removal requirement for a parameter and the inability to meet the requirement is not caused by excessive infiltration, as defined in 40-CFR 35.2005(b)(16), a lower percent removal requirement or a mass loading limit may be substituted provided that the permittee can demonstrate that the provisions of 40 CFR 133.103(d) can be met. Note that the TSS percent removal does not apply to lagoon facilities.

⁴ Limits for E. Coli will be based upon the Recreational Use Classification as shown in **Table J**. The limits will be identified in the certification and will be fully enforceable under this permit.

- 5 Limits for total ammonia will be based on **Table K and Table L**. The effluent total ammonia limits and reporting requirements will be identified in the certification for this permit and the limits and reporting requirements are fully enforceable under this permit.
- 6 A Total Inorganic Nitrogen limit will be calculated based on the methodology summarized in the rationale to this permit and imposed only where the certification indicates a limit or monitoring is necessary; otherwise, the certification will indicate that neither a limit nor reporting requirements will be specified. The Total Inorganic Nitrogen limit and/or reporting requirements, where applied, will be fully enforceable under this permit.
- 7 Total Phosphorous limits will be established where applicable and will be based on Colorado Regulation Nos. 71-75. The limits and reporting requirements, where applicable, will be fully enforceable under this permit.
- 8 “Report”, only, requirements may be established for total dissolved solids in accordance with Colorado Regulation No. 39 for facilities discharging to the Colorado River basin. Additionally, “Report” only requirements may be established for other pollutants that are not limited in this permit based on findings that the pollutants are listed along with the facility’s receiving stream in Colorado Regulation Nos. 93 and/or 94. The reporting requirements, where applicable, will be discussed in the certification for this permit and are fully enforceable under this permit.
- i **Modified Limitations for Discharges to 303(d) Listed Segments**
- Limitations for pH, fecal coliform, E. coli and total inorganic nitrogen/nitrate, or any other applicable parameter may be added or modified by incorporating limits based on the wasteload allocation for the discharge, as set forth in an approved total maximum daily load for the segment, and as identified in the certification. In the absence of an approved total maximum daily load, limits may be established at the water quality standard as identified in the certification. These modified limits will be fully enforceable under this permit.
- ii **Site-specific Limitations**
- Site-specific limitations for a parameter may be added on a case-by-case basis that are equivalent to the Basic Standards and Methodologies for Surface Water, or Regulation for Effluent Limitations, or any other applicable regulation, and would be specified in the certification along with the appropriate monitoring frequencies.]
- iii **Other Site-specific Permit Conditions**
- Specific permit conditions may be applied for compliance with any Division compliance order on consent, cease and desist order, or an EPA administrative order, or similar decree promulgated by the Division, EPA or any other public entity.

Table J: E. coli Effluent Limitations based upon use classifications

Recreational Use Classification	Limitation	
	30-day Avg.	7-day Avg.

8. Industrial Waste Management

- a. The Permittee has the responsibility to protect the Domestic Wastewater Treatment Works (DWTW), as defined at section 25.8.201(5) of the Colorado Water Quality Control Act, or the Publicly-Owned Treatment Works (POTW), as defined at 40 CFR Section 403.3(o) of the federal pretreatment regulations, from pollutants which would cause pass through or interference, as defined at 40 CFR 403.3(n) and (i), or otherwise be incompatible with operation of the treatment works including interference with the use or disposal of municipal sludge.
- b. As a condition of coverage under this permit, the facility may not accept wastes from a significant industrial user, or be required to develop an industrial pretreatment program pursuant to Section 307 of the Water Quality Act or Section 63.9.A(2) of the Colorado Pretreatment Regulations.

C. MONITORING REQUIREMENTS

1. Influent Parameters

Regardless of whether or not an effluent discharge occurs and in order to obtain an indication of the current influent loading as compared to the approved capacity specified in the certification and in Part I, Section B.2.; the permittee shall monitor influent parameters at the following required frequencies, as identified in the certification of this permit, the results to be reported on the Discharge Monitoring Report (See Part I, Section F.2.):

a. MECHANICAL PLANTS

Influent Monitoring Requirements – Design Flows Less than or Equal to 0.25 MGD (Mechanical)		
Influent Parameter	Measurement Frequency	Sample Type
Flow, MGD	Continuous ¹	Recorder ¹
Biochemical Oxygen Demand, 5-Day, mg/l ²	Monthly	Composite
Biochemical Oxygen Demand, 5-Day, lbs/day ²	Monthly	Calculated
Total Suspended Solids, mg/l	Monthly	Composite
Raw Water Total Dissolved Solids, mg/l ³	Quarterly ³	Grab or Composite ³

Influent Monitoring Requirements – Design Flows Greater than 0.25 MGD (Mechanical)		
Influent Parameter	Measurement Frequency	Sample Type
Flow, MGD	Continuous ¹	Recorder ¹
Biochemical Oxygen Demand, 5-Day, mg/l ²	Weekly	Composite
Biochemical Oxygen Demand, 5-Day, lbs/day ²	Weekly	Calculated
Total Suspended Solids, mg/l	Weekly	Composite
Raw Water Total Dissolved Solids, mg/l ³	Quarterly ³	Grab or Composite ³

¹ The monitoring frequency and sample type for influent flow is specified in the certification and is fully enforceable under this permit. Mechanical type treatment facilities are required to have either an influent or effluent flow measuring and recording device. However, where these devices are not in place at the time of certification, the permittee has one year from the end of the calendar month that certification was given to install the required equipment. Where such equipment is in place, the frequency and type of flow monitoring will be "Continuous" and "Recorder", respectively. Where such equipment is not in place, the frequency and type of flow monitoring, during the interim period, will be specified in the certification. For certain facilities, the use of a metered pumping rate or potable water use may be allowed. In these cases, a monitoring frequency and sample type of "Continuous" and "Meter", respectively, will be specified in the certification.

² Monitoring for CBOD₅ may be substituted for monitoring for BOD₅ as identified in the certification.

³ Monitoring requirements will be established for total dissolved solids in accordance with Colorado Regulation No. 39 only for those facilities discharging to the Colorado River basin, which will be stated in the certification. If more than one source is being utilized, a composite sample proportioned to flow shall be prepared from individual grab samples.

b. LAGOON FACILITIES

Influent Monitoring Requirements – Design Flows Less than or Equal to 0.5 MGD (Lagoon)		
Influent Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
Biochemical Oxygen Demand, 5-Day, mg/l ²	Monthly	Composite
Biochemical Oxygen Demand, 5-Day, lbs/day ²	Monthly	Calculated
Raw Water Total Dissolved Solids, mg/l ³	Quarterly ³	Grab or Composite ³

Influent Monitoring Requirements – Design Flows Greater than 0.5 MGD (Lagoon)		
Influent Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
Biochemical Oxygen Demand, 5-Day, mg/l ²	Weekly	Composite
Biochemical Oxygen Demand, 5-Day, lbs/day ²	Weekly	Calculated
Raw Water Total Dissolved Solids, mg/l ³	Quarterly ³	Grab or Composite ³

¹ The monitoring frequency and sample type for influent flow is specified in the certification and is fully enforceable under this permit. Lagoon type treatment facilities are required to have influent flow measuring and recording devices. However, where these devices are not in place at the time of certification, the permittee has one year from the end of the calendar month that certification was given to install the required equipment. Where such equipment is in place, the frequency and type of flow monitoring will be "Continuous" and "Recorder", respectively. Where such equipment is not in place, the frequency and type of flow monitoring, during the interim period, will be specified in the certification. For certain facilities, the use of a metered pumping rate or potable water use may be allowed. In these cases, a monitoring frequency and sample type of "Continuous" and "Meter," respectively, will be specified in the certification.

² Monitoring for CBOD₅ may be substituted for monitoring for BOD₅ as identified in the certification.

³ Monitoring requirements will be established for total dissolved solids in accordance with Colorado Regulation No. 39 only for those facilities discharging to the Colorado River basin, which will be stated in the certification. If more than one source is being utilized, a composite sample proportioned to flow shall be prepared from individual grab samples.

Self-monitoring samples taken in compliance with the monitoring requirements specified for mechanical facilities shall be taken at the following location: Monitoring point 300I, at a representative point prior to any biological treatment.

2. Effluent Parameters

In order to obtain an indication of the probable compliance or non-compliance with the effluent limitations specified in Part I, Section B.2., the permittee shall monitor effluent parameters at the following required frequencies, as identified in the certification of this permit, the results to be reported on the Discharge Monitoring Report (See Part I, Section F.2.):

a. LAGOON FACILITIES DISCHARGING TO UNCLASSIFIED WATERS

Effluent Monitoring Requirements – Design Flows Less than or Equal to 0.5 MGD (Lagoon/Unclassified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
BOD ₅ , mg/l ²	Monthly	Grab
BOD ₅ , percent removal ²	Monthly	Calculated
Total Suspended Solids, mg/l	Monthly	Grab
Total Residual Chlorine, mg/l ³	Weekly	Grab
pH, s.u.	Weekly	Grab
Oil and Grease, mg/l	Weekly	Visual
E. Coli, no/100 ml	Monthly	Grab
Total Dissolved Solids, mg/l ⁴	Quarterly	Grab

Effluent Monitoring Requirements – Design Flows Greater than to 0.5 MGD (Lagoon/Unclassified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
Biochemical Oxygen Demand, 5-Day, mg/l ²	Weekly	Grab
BOD ₅ , percent removal ²	Weekly	Calculated
Total Suspended Solids, mg/l	Weekly	Grab
Total Residual Chlorine, mg/l ³	5X/Week	Grab
pH, s.u.	5X/Week	Grab
Oil and Grease, mg/l	5X/Week	Visual
E. Coli, no/100 ml	Weekly	Grab
Total Dissolved Solids, mg/l ⁴	Quarterly	Grab

- ¹ The monitoring frequency and sample type for effluent flow is specified in the certification and is fully enforceable under this permit. Lagoon type treatment facilities are required to have, at a minimum, an effluent flow-measuring device. However, where these devices are not in place at the time of certification, the permittee has one year from the end of the calendar month that certification was given to install the required equipment. Where such equipment is in place, the frequency and type of flow monitoring will generally be "3X/Week" and "Measured", respectively. Where such equipment is not in place, the frequency and type of flow monitoring, during the interim period, will be specified in the certification.
- ² Monitoring for CBOD₅ may be substituted for monitoring for BOD₅ as identified in the certification.
- ³ Monitoring for total residual chlorine is only required when chlorine is in use.
- ⁴ For total dissolved solids, if "Report" only is established in the certification, monitoring and reporting will be required. The monitoring frequencies and sample types will be specified in the certification and these are fully enforceable under this permit.

b. LAGOON FACILITIES DISCHARGING TO CLASSIFIED WATERS

Effluent Monitoring Requirements – Design Flows Less than or Equal to 0.5 MGD (Lagoon/Classified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
BOD ₅ , mg/l ²	Monthly	Grab
BOD ₅ , percent removal ²	Monthly	Calculated
Total Suspended Solids, mg/l	Monthly	Grab
Total Residual Chlorine, mg/l ³	Weekly	Grab
pH, s.u.	Weekly	Grab
Oil and Grease, mg/l	Weekly	Visual
E. Coli, no/100 ml ⁴	Monthly	Grab
Total Ammonia, mg/l as N	Monthly	Grab
Total Inorganic Nitrogen, mg/l	Monthly ⁵	Grab ⁵
Total Phosphorous, mg/l	Monthly ⁶	Grab ⁶
Total Phosphorous, lbs/month	Monthly ⁶	Calculated ⁶
Total Phosphorous, cumulative lbs/previous 12 consecutive months	Monthly ⁶	Calculated ⁶
Total Dissolved Solids, mg/l	Quarterly ⁷	Grab ⁷
Other Pollutants, units	Quarterly ⁷	Grab ⁷

Effluent Monitoring Requirements – Design Flows Greater than 0.5 MGD (Lagoon/Classified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	1	1
BOD ₅ , mg/l ²	Weekly	Grab
BOD ₅ , percent removal ²	Weekly	Calculated
Total Suspended Solids, mg/l	Weekly	Grab
Total Residual Chlorine, mg/l ³	5X/Week	Grab
pH, s.u.	5X/Week	Grab
Oil and Grease, mg/l	5X/Week	Visual
E. Coli, no/100 ml ⁴	Weekly	Grab
Total Ammonia, mg/l as N	Weekly	Grab
Total Inorganic Nitrogen, mg/l	Weekly ⁵	Grab ⁵
Total Phosphorous, mg/l	Weekly ⁶	Grab ⁶
Total Phosphorous, lbs/month	Monthly ⁶	Calculated ⁶
Total Phosphorous, cumulative lbs/previous 12 consecutive months	Monthly ⁶	Calculated ⁶
Total Dissolved Solids, mg/l	Quarterly ⁷	Grab ⁷
Other Pollutants, units	Quarterly ⁷	Grab ⁷

¹ The monitoring frequency and sample type for effluent flow is specified in the certification and is fully enforceable under this permit. Lagoon type treatment facilities are required to have, at a minimum, an effluent flow-measuring device. However, where these devices are not in place at the time of certification, the permittee has one year from the end of the calendar month that certification was given to install the required equipment. Where such equipment is in place, the frequency and type of flow monitoring will generally be "3X/Week" and "Measured", respectively. Where such equipment is not in place, the frequency and type of flow monitoring, during the interim period, will be specified in the certification.

² Monitoring for CBOD₅ may be substituted for monitoring for BOD₅ as identified in the certification.

³ Monitoring for total residual chlorine is only required when chlorine is in use.

⁴ Monitoring for E. Coli will apply based on the corresponding limit imposed; such shall be specified in the certification.

⁵ Where a limitation and/or reporting requirement has been established in the certification, monitoring and reporting will be required. The monitoring frequency and sample type will be specified in the certification and these are fully enforceable under this permit.

⁶ Where phosphorous limits have been established in the certification, monitoring and reporting will be required. The monitoring frequencies and sample types for phosphorous will be specified in the certification and these are fully enforceable under this permit.

⁷ For any other pollutants including total dissolved solids for which "Report" only is established in the certification, monitoring and reporting will be required. The monitoring frequencies and sample types for other pollutants will be specified in the certification and these are fully enforceable under this permit.

Self-monitoring samples taken in compliance with the monitoring requirements specified above shall be taken at the following location: Discharge point 001A, at the outfall line following final treatment but prior to entering the receiving stream.

c. MECHANICAL FACILITIES DISCHARGING TO UNCLASSIFIED WATERS

Effluent Monitoring Requirements – Design Flows Less than or Equal to 0.25 MGD (Mechanical/Unclassified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
BOD ₅ , mg/l ²	Monthly	Composite
BOD ₅ , percent removal ²	Monthly	Calculated
Total Suspended Solids, mg/l	Monthly	Composite
Total Suspended Solids, percent removal	Monthly	Calculated
Total Residual Chlorine, mg/l ³	Weekly	Grab
pH, s.u.	Weekly	Grab
Oil and Grease, mg/l	Weekly	Visual
E. Coli, no/100 ml ⁴	Monthly	Grab
Total Dissolved Solids, mg/l ⁴	Quarterly	Grab

Effluent Monitoring Requirements – Design Flows Greater than 0.25 MGD (Mechanical/Unclassified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
BOD ₅ , mg/l ²	Weekly	Composite
BOD ₅ , percent removal ²	Weekly	Calculated
Total Suspended Solids, mg/l	Weekly	Composite
Total Suspended Solids, percent removal	Weekly	Calculated
Total Residual Chlorine, mg/l ³	3X/Week	Grab
pH, s.u.	Daily	Grab
Oil and Grease, mg/l	Daily	Visual
E. Coli, no/100 ml	Weekly	Grab
Total Dissolved Solids, mg/l ⁴	Quarterly	Grab

¹ The monitoring frequency and sample type for effluent flow is specified in the certification and is fully enforceable under this permit. Mechanical type treatment facilities are required to have either influent or effluent flow measuring and recording devices. However, where these devices are not in place at the time of certification, the permittee has one year from the end of the calendar month that certification was given to install the required equipment. Where such equipment is in place, the frequency and type of flow monitoring will be "Continuous" and "Recorder", respectively. Where such equipment is not in place, the frequency and type of flow monitoring, during the interim period, will be specified in the certification. For certain facilities, the use of a metered pumping rate or potable water use or may be allowed. In these cases, a monitoring frequency and sample type of "Continuous" and "Meter", respectively, will be specified in the certification.

² Monitoring for CBOD₅ may be substituted for monitoring for BOD₅ as identified in the certification.

³ Monitoring for total residual chlorine is only required when chlorine is in use.

⁴ For total dissolved solids, if "Report" only is established in the certification, monitoring and reporting will be required. The monitoring frequencies and sample types will be specified in the certification and these are fully enforceable under this permit.

d. MECHANICAL FACILITIES DISCHARGING TO CLASSIFIED WATERS

Effluent Monitoring Requirements – Design Flows Less than or Equal to 0.25 MGD (Mechanical/Classified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
BOD ₅ , mg/l ²	Monthly	Composite
BOD ₅ , percent removal ²	Monthly	Calculated
Total Suspended Solids, mg/l	Monthly	Composite
Total Suspended Solids, percent removal	Monthly	Calculated
Total Residual Chlorine, mg/l ³	Weekly	Grab
pH, s.u.	Weekly	Grab
Oil and Grease, mg/l	Weekly	Visual
E. Coli, no/100 ml ⁴	Monthly	Grab

Total Inorganic Nitrogen, mg/l	Monthly ⁵	Composite ⁵
Total Phosphorous, mg/l	Monthly ⁶	Composite ⁶
Total Phosphorous, lbs/month	Monthly ⁶	Calculated ⁶
Total Phosphorous, cumulative lbs/previous 12 consecutive months	Monthly ⁶	Calculated ⁶
Total Dissolved Solids, mg/l	Quarterly ⁷	Grab ⁷
Other Pollutants, units	Quarterly ⁷	Grab or Composite ⁷

Effluent Monitoring Requirements – Design Flows Greater than 0.25 MGD (Mechanical/Classified)		
Parameter	Measurement Frequency	Sample Type
Flow, MGD	¹	¹
BOD ₅ , mg/l ²	Weekly	Composite
BOD ₅ , percent removal ²	Weekly	Calculated
Total Suspended Solids, mg/l	Weekly	Composite
Total Suspended Solids, percent removal	Weekly	Calculated
Total Residual Chlorine, mg/l ³	3X/Week	Grab
pH, s.u.	Daily	Grab
Oil and Grease, mg/l	Daily	Visual
E. Coli, no/100 ml ⁴	Weekly	Grab
Total Ammonia, mg/l as N	Weekly	Composite
Total Inorganic Nitrogen, mg/l	Weekly ⁵	Composite ⁵
Total Phosphorous, mg/l	Weekly ⁶	Composite ⁶
Total Phosphorous, lbs/month	Monthly ⁶	Calculated ⁶
Total Phosphorous, cumulative lbs/previous 12 consecutive months	Monthly ⁶	Calculated ⁶
Total Dissolved Solids, mg/l	Quarterly ⁷	Grab ⁷
Other Pollutants, units	Quarterly ⁷	Grab or Composite ⁷

¹ The monitoring frequency and sample type for effluent flow is specified in the certification and is fully enforceable under this permit. Mechanical type treatment facilities are required to have either influent or effluent flow measuring and recording devices. However, where these devices are not in place at the time of certification, the permittee has one year from the end of the calendar month that certification was given to install the required equipment. Where such equipment is in place, the frequency and type of flow monitoring will be "Continuous" and "Recorder", respectively. Where such equipment is not in place, the frequency and type of flow monitoring, during the interim period, will be specified in the certification. For certain facilities, the use of a metered pumping rate or potable water use or may be allowed. In these cases, a monitoring frequency and sample type of "Continuous" and "Meter", respectively, will be specified in the certification.

² Monitoring for CBOD₅ may be substituted for monitoring for BOD₅ as identified in the certification.

³ Monitoring for total residual chlorine is only required when chlorine is in use.

⁴ Monitoring for E. Coli will apply based on the corresponding limit imposed; such shall be specified in the certification.

- 5 Where a total inorganic nitrogen limit or reporting requirements have been established in the certification, monitoring and reporting will be required. The monitoring frequency and sample type for total inorganic nitrogen will be specified in the certification and these are fully enforceable under this permit.
- 6 Where phosphorous limits have been established in the certification, monitoring and reporting will be required. The monitoring frequencies and sample types for phosphorous will be specified in the certification and these are fully enforceable under this permit.
- 7 For any other pollutants including total dissolved solids for which "Report" only is established in the certification, monitoring and reporting will be required. The monitoring frequencies and sample types for other pollutants will be specified in the certification and these are fully enforceable under this permit.

Self-monitoring samples taken in compliance with the monitoring requirements specified above shall be taken at the following location: Discharge point 001A, at the outfall line following disinfection but prior to entering the receiving stream.

3. Salinity Parameters

If discharges ultimately reach the Colorado River, as will be indicated in the certification, additional requirements related to salinity are applied. Specifically, in order to obtain an indication of the increase in salinity due to the treatment and use of water within this service area, the permittee shall monitor the raw water source and the wastewater effluent at the following required frequencies, the results to be reported on the Discharge Monitoring Report (See Part I, Section F.2.):

APPLICABLE TO DISCHARGES IN THE COLORADO RIVER BASIN		
Parameter	Measurement Frequency	Sample Type
Raw Water Source - Total Dissolved Solids, TDS, mg/l	Quarterly	Grab ¹
Wastewater Effluent - Total Dissolved Solids, TDS, mg/l	Quarterly	Grab

Self-monitoring samples taken in compliance with the monitoring requirements specified above shall be taken prior to treatment of the raw drinking water source (1 with a composite sample proportioned to flow prepared from individual grab samples if more than one source is being utilized), and at the established wastewater treatment facility effluent sampling point identified above in Section I.C.2.

D. DEFINITIONS OF TERMS

1. "Thirty (30) day average" means, except for fecal coliform or *E. coli* bacteria (see geometric mean), the arithmetic mean of all samples collected during a thirty (30) consecutive-day period. When calculating the 30-day average, a value of zero should be used in place of any value that is less than the reporting limit. If all values are less than the reporting limit, "<x" should be reported, where "x" is the reporting limit. The permittee shall report the appropriate mean of all self-monitoring sample data collected during the calendar month on the Discharge Monitoring Reports. Samples shall not be used for more than one (1) reporting period.
2. "Seven (7) day average" means, with the exception of fecal coliform or *E. coli* bacteria (see geometric mean), the arithmetic mean of all samples collected in a seven (7) consecutive day period. When calculating the 7-day average, a value of zero should be used in place of any value that is less than the reporting limit. If all values are less than the reporting limit, "<x" should be reported, where "x" is the reporting limit. Such seven (7) day averages shall be calculated for all calendar weeks, which are defined as beginning on Sunday and ending on Saturday. If the calendar week overlaps two months (i.e. the Sunday is in one month and the Saturday in the following month), the seven (7) day average calculated for that calendar week shall be associated with the month that contains the Saturday. Samples may not be used for more than one (1) reporting period.
3. For fecal coliform bacteria concentrations, the thirty (30) day and seven (7) day averages shall be determined as explained in definitions 1 and 2 above, respectively, except that the geometric mean shall be used instead of the arithmetic mean. The geometric mean may be calculated using two different methods. For the methods shown, a, b, c, d, etc. are individual sample results, and n is the total number of samples.

Method 1:

$$\text{Geometric Mean} = (a * b * c * d * \dots)^{(1/n)} \quad "*" - \text{means multiply}$$

Method 2:

Geometric Mean = antilog ($[\log(a)+\log(b)+\log(c)+\log(d)+\dots]/n$)

Graphical methods, even though they may also employ the use of logarithms, may introduce significant error and may not be used.

In calculating the geometric mean, for those individual sample results that are reported by the analytical laboratory to be "less than" a numeric value, the numeric value shall be used in the calculations unless the result is "less than 2.2". If the result is "less than 2.2", use a value of 1 in the calculations. If all individual analytical results for the month are reported to be less than numeric values, then report "less than" the largest of those numeric values on the monthly DMR. Otherwise, report the calculated value.

For any individual analytical result of "too numerous to count" (TNTC), that analysis shall be considered to be invalid and another sample shall be promptly collected for analysis. If another sample cannot be collected within the same sampling period for which the invalid sample was collected (during the same month if monthly sampling is required, during the same week if weekly sampling is required, etc.), then the following procedures apply:

A minimum of two samples shall be collected for coliform analysis within the next sampling period.

If the sampling frequency is monthly or less frequent: For the period with the invalid sample results, leave the spaces on the corresponding DMR for reporting coliform results empty and attach to the DMR a letter noting that a result of TNTC was obtained for that period, and explain why another sample for that period had not been collected.

If the sampling frequency is more frequent than monthly: Eliminate the result of TNTC from any further calculations, and use all the other results obtained within that month for reporting purposes. Attach a letter noting that a result of TNTC was obtained, and list all individual analytical results and corresponding sampling dates for that month.

4. The "Daily Maximum" limitation for Oil & Grease and pH shall be applied as an instantaneous maximum (or, for pH or DO, instantaneous minimum) value. The instantaneous value is defined as the analytical result of any individual sample. Report the maximum (and/or minimum) of all instantaneous values within the calendar month. Any instantaneous value beyond the noted daily maximum limitation for the indicated parameter shall be considered a violation of this permit.
5. The "Daily Maximum" limitation for all other parameters besides Oil & Grease and pH shall be applied as a maximum daily average. The daily average is defined as the arithmetic mean of the analytical results for all samples collected during a 24-hour period. If only one sample is collected during the 24-hour period, the analytical result for that single sample shall be used as the daily average. Report the maximum of all daily average values within the calendar month. Any daily average beyond the noted daily maximum limitation for the indicated parameter shall be considered a violation of this permit.
6. Definitions for sample types are as follows:

A "recorder" requires the continuous operation of a chart and/or totalizer (or drinking water rotor meters or pump hour meters where previously approved).

A "composite" sample, for monitoring requirements, is defined as a minimum of four (4) grab samples collected at equally spaced two (2) hour intervals and proportioned according to flow.

A "24 hour composite" sample is a combination of at least eight (8) sample aliquots of at least 100 milliliters, collected at equally spaced intervals during the operating hours of a facility over a twenty-four (24) hour period. For volatile pollutants, aliquots must be combined in the laboratory immediately before analysis. The composite must be flow proportional; either the time interval between each aliquot or the volume of each aliquot must be proportional to either the wastewater or effluent flow at the time of sampling or the total wastewater or effluent flow since the collection of the previous aliquot. Aliquots may be collected manually or automatically.

A "grab" sample, for monitoring requirements, is defined as a single "dip and take" sample collected so as to be representative of the parameter being monitored.

An "instantaneous" measurement, for monitoring requirements, is defined as a single reading, observation, or measurement using existing monitoring facilities.

A "sludge composite" sample is a representative sample of sludge from a wastewater treatment process unit, storage unit or stabilization process unit. The sample shall consist of a minimum of three grab samples of 500 milliliters each taken at the

start, middle and end of a pumping cycle, or if discharge is continuous or of a cyclical nature, grab samples of 250 milliliters each shall be taken four times during a twenty-four (24) hour period and combined. Composite samples of semi-dewatered, dewatered and dried sludge shall consist of a minimum of four (4) grab samples of 0.5 kilograms each taken four times during a twenty-four (24) hour period and combined.

7. Monitoring is required only when chlorine is used for disinfection. In the calculation of average total residual chlorine concentrations, those analytical results that are less than the method detection limit shall be considered to be zero for calculation purposes. If all individual analytical results that would be used in the calculations are below the method detection limit, then "less than \underline{x} ", where \underline{x} is the method detection limit, shall be reported on the monthly DMR. Otherwise, report the calculated value.

For purposes of this permit the method detection limits of the DPD colorimetric and the amperometric titration methods of analysis for total residual chlorine are as follows:

<u>Method</u>	<u>Method Detection Limit, mg/l</u>
DPD colorimetric	0.10 mg/l
Amperometric titration	0.05 mg/l

If, during the life of this permit, there are improvements in approved analytical procedures that result in lower detection limits, this permit may be reopened to propose the incorporation of those detection limits into this permit. Modification of the permit will be in accordance with the requirements of 40 CFR Part 124.

8. The "average monthly loading" is calculated by dividing the total of the daily loads, as derived from each day's calculated measurement, by the number of days during the month the measurements were made. In completing calculations for these averages, quantities or loadings are to be reported in lbs/day using the following equation:

$$\text{Quantity (lbs/day)} = \text{Flow (MGD)} \times \text{concentration (mg/l)} \times 8.34 \text{ (conversion factor)}$$

9. If visible sheen is noted, a grab sample shall be collected and analyzed for oil and grease. The results are to be reported on the DMR under parameter 03582.
10. When the measurement frequency indicated is quarterly, samples may be collected at any time during the calendar quarter, with the results being reported on the monthly DMR corresponding to the last month of the quarter (March, June, September or December). If the discharge is intermittent, samples must be collected during the period when discharge occurs.
11. To calculate the total phosphorous pounds discharged during the month, multiply the 30-day average effluent flow in MGD for the month by the 30-day average effluent phosphorous concentration for the month, multiplied by the factor 8.34, then multiplied by the number of days in the respective month.
12. The total number of pounds of phosphorous discharged during the previous twelve (12) consecutive months shall be calculated by summing the monthly loadings in pounds, ending with the month for which the DMR is being completed.

Additional relevant definitions are found in the Colorado Water Quality Control Act, CRS §§ 25-8-101 et seq., the Regulations for the State Discharge Permit System, 5 CCR 1002-2, § 6.1.0 et seq and other applicable regulations.

E. GENERAL MONITORING, SAMPLING AND REPORTING REQUIREMENTS

1. Routine Reporting of Data

Reporting of the data gathered in compliance with Part I.B.1 shall be on a **monthly** basis. Reporting of all data gathered shall comply with the requirements of Part I.E. (General Requirements). Monitoring results shall be summarized for each calendar month and reported on Division approved discharge monitoring report (DMR) forms (EPA form 3320-1). One form shall be mailed to the Water Quality Control Division, as indicated below, so that the DMR is received no later than the 28th day of the following month (for example, the DMR for the first calendar quarter must be received by the Division by April 28th). If no discharge occurs during the reporting period, "No Discharge" shall be reported.

The DMR forms consist of four pages - the top "original" copy, and three attached no-carbon-required copies. After the DMR form has been filled out and signed, the four copies must be separated and distributed as follows:

The first original signed copy of each discharge monitoring report (DMR) shall be submitted to the Division at the following address:

Colorado Department of Public Health and Environment
Water Quality Control Division
WQCD-P-B2
4300 Cherry Creek Drive South
Denver, Colorado 80246-1530

Additional copies are for the permittee records. The Discharge Monitoring Report forms shall be filled out accurately and completely in accordance with requirements of this permit and the instructions on the forms. They shall be signed by an authorized person as identified in Part I.E.6.

2. Annual Biosolids Report

The permittee shall provide the results of all biosolids monitoring and information on management practices, land application sites, site restrictions and certifications. Such information shall be provided no later than **February 19th** of each year. Reports shall be submitted addressing all such activities that occurred in the previous calendar year. If no biosolids were applied to the land during the reporting period, "no biosolids applied" shall be reported. Until further notice, biosolids monitoring results shall be reported on forms, or copies of forms, provided by the Division. Annual Biosolids Reports required herein, shall be signed and certified in accordance with the Signatory Requirements, Part I.D.1, and submitted as follows:

The original copy of each form shall be submitted to the following address:

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT,
WATER QUALITY CONTROL DIVISION
WQCD-PERMITS-B2
4300 CHERRY CREEK DRIVE SOUTH
DENVER, COLORADO 80246-1530

A copy of each form shall be submitted to the following address:

WATER PROGRAM REGIONAL BIOSOLIDS PROGRAM
UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGION VIII,
1595 WYNKOOP STREET
DENVER, CO 80202-2466

ATTENTION: BIOSOLIDS PROGRAM MANAGER

3. Representative Sampling

Samples and measurements taken for the respective identified monitoring points as required herein shall be representative of the volume and nature of: 1) all influent wastes received at the facility, including septage, biosolids, etc.; 2) the monitored effluent discharged from the facility; and 3) biosolids produced at the facility. All samples shall be taken at the monitoring points specified in this permit and, unless otherwise specified, before the influent, effluent, or biosolids wastestream joins or is diluted by any other wastestream, body of water, or substance. Monitoring points shall not be changed without notification to and prior approval by the Division.

4. Influent and Effluent Sampling Points

Influent and effluent sampling points shall be so designed or modified so that: 1) a sample of the influent can be obtained after preliminary treatment and prior to primary or biological treatment and 2) a sample of the effluent can be obtained at a point after the final treatment process and prior to discharge to state waters. The permittee shall provide access to the Division to sample at these points.

5. Analytical and Sampling Methods for Monitoring

The permittee shall install, calibrate, use and maintain monitoring methods and equipment, including biological and indicated

pollutant monitoring methods. All sampling shall be performed by the permittee according to specified methods in 40 C.F.R. Part 136; methods approved by EPA pursuant to 40 C.F.R. Part 136; or methods approved by the Division, in the absence of a method specified in or approved pursuant to 40 C.F.R. part 136. **The analytical method selected for a parameter shall be the one that can measure the lowest practical quantitation limit (PQL) for that parameter unless the permit limitation or stream standard for those parameters, is within the testing range of another approved method.** When requested in writing, the Division may approve an alternative analytical procedure or any significant modification to an approved procedure.

When the most sensitive analytical method which complies with this part, has a PQL greater than or equal to the permit limit, the permittee shall report "less than (the PQL)," as appropriate. Such reports shall not be considered as violations of the permit limit. The present lowest PQLs (State Lab Sept 2007) for specific parameters (which have limitations that are, in some cases, less than or equal to the detection limit) are as follows:

Effluent Characteristic	Practical Quantitation Limits, µg/l	
Arsenic	1	
Cadmium	0.06	
Total Residual Chlorine		
DPD colorimetric	0.10	mg/l
Amperometric titration	0.05	mg/l
Chromium	2	
Chromium, Hexavalent	2	
Copper	5	
Cyanide	10	
Iron	10	
Lead	1	
Manganese	2	
Mercury	0.003	
Nickel	3	
Phenols	15	
Selenium	1	
Silver	0.5	
Uranium	1	
Zinc	10	

These limits apply to the total recoverable or the potentially dissolved fraction of metals.

For hexavalent chromium, samples must be unacidified so dissolved concentrations will be measured rather than potentially dissolved concentrations.

Due to the fact that there is no reliable method of measuring free cyanide in a chlorinated effluent, the American Society for Testing and Materials (ASTM) analytical procedure D2036-81, Method C, which detects weak acid dissociable cyanides, shall be the analytical procedure used. The lower practical quantitation limit for the analysis described above must be at least as low as 0.030 mg/l. In the calculation of average concentrations of cyanide, those analytical results that are less than the practical quantitation limit shall be considered to be zero for calculation purposes. If all individual analytical results that would be used in the calculations are below the practical quantitation limit, then "less than x ", where x is the practical quantitation limit, shall be reported on the monthly DMR. Otherwise, report the calculated value.

6. Records

- a. The permittee shall establish and maintain records. Those records shall include, but not be limited to, the following:
 - i. The date, type, exact place, and time of sampling or measurements;
 - ii. The individual(s) who performed the sampling or measurements;
 - iii. The date(s) the analyses were performed;
 - iv. The individual(s) who performed the analyses;
 - v. The analytical techniques or methods used; and
 - vi. The results of such analyses.

- b. The permittee shall retain for a minimum of three (3) years records of all monitoring information, including all original strip chart recordings for continuous monitoring instrumentation, all calibration and maintenance records, copies of all reports required by this permit and records of all data used to complete the application for this permit. This period of retention shall be extended during the course of any unresolved litigation regarding the discharge of pollutants by the permittee or when requested by the Division or Regional Administrator.

7. Flow Measuring Devices

Flow metering at the headworks shall be provided to give representative values of throughput and treatment of the wastewater system. The metering device shall be equipped with a local flow indication instrument and a flow indication-recording-totalization device suitable for providing permanent flow records, which should be in the plant control building. For mechanical facilities, where influent flow metering is not practical and the same results may be obtained from metering at the effluent end of the treatment facility, this type of flow metering arrangement will be considered. For lagoons, an instantaneous or continuous effluent flow measuring device shall be required in addition to the above described influent flow measuring device. At the request of the Division, the permittee must be able to show proof of the accuracy of any flow-measuring device used in obtaining data submitted in the monitoring report. The flow-measuring device must indicate values within ten (10) percent of the actual flow entering the facility.

8. Signatory Requirements

All reports, and other information required by the Division shall be signed and certified for accuracy by the permittee in accord with the following criteria:

- a. In the case of corporations, by a principal executive officer of at least the level of vice-president or his or her duly authorized representative, if such representative is responsible for the overall operation of the facility from which the discharge described in the form originates;
- b. In the case of a partnership, by a general partner;
- c. In the case of a sole proprietorship, by the proprietor;
- d. In the case of a municipal, state, or other public facility, by either a principal executive officer, ranking elected official, or other duly authorized employee.

The permittee shall make the following certification on all such documents:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations".

PART II

A. NOTIFICATION REQUIREMENTS

1. Notification to Parties

All notification requirements under this section shall be directed as follows:

- a. Oral Notifications, other than for spills, during normal business hours shall be to:

Water Quality Protection Section - Industrial Compliance Program
Water Quality Control Division
Telephone: (303) 692-3500

Spills notifications at any time and **other notifications after hours** shall be to:

Emergency Response Coordinator
Telephone: 1-877-518-5608

- b. Written notification shall be to:

Water Quality Protection Section - Industrial Compliance Program
Water Quality Control Division
Colorado Department of Public Health and Environment
WQCD-WQP-B2
4300 Cherry Creek Drive South
Denver, CO 80246-1530

2. Change in Discharge

The permittee shall notify the Division, in writing, of any planned physical alterations or additions to the permitted facility. Notice is required only when:

- a. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged, or;
- b. The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported pursuant to an approved land application plan.

The permittee shall give advance notice to the Division of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

Whenever notification of any planned physical alterations or additions to the permitted facility is required pursuant to this section, the permittee shall furnish the Division such plans and specifications which the Division deems reasonably necessary to evaluate the effect on the discharge, the stream, or ground water. If the Division finds that such new or altered discharge might be inconsistent with the conditions of the permit, the Division shall require a new or revised permit application and shall follow the procedures specified in Sections 61.5 through 61.6, and 61.15 of the Colorado Discharge Permit System Regulations.

3. Special Notifications - Definitions

- a. **Bypass:** The intentional diversion of waste streams from any portion of a treatment facility.
- b. **Severe Property Damage:** Substantial physical damage to property at the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. It does not mean economic loss caused by delays in production.

- c. Spill: An incident in which flows or solid materials are accidentally or unintentionally allowed to flow or escape so as to be lost from the treatment, processing or manufacturing system which may cause or threaten pollution of state waters.
- d. Upset: An exceptional incident in which there is unintentional and temporary noncompliance with permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventative maintenance, or careless or improper operation.

4. Noncompliance Notification

- a. If, for any reason, the permittee does not comply with or will be unable to comply with any discharge limitations or standards specified in this permit, the permittee shall, at a minimum, provide the Division and EPA with the following information:
 - i) A description of the discharge and cause of noncompliance;
 - ii) The period of noncompliance, including exact dates and times and/or the anticipated time when the discharge will return to compliance; and
 - iii) Steps being taken to reduce, eliminate, and prevent recurrence of the noncomplying discharge.
- b. The permittee shall report the following circumstances **orally within twenty-four (24) hours** from the time the permittee becomes aware of the circumstances, and shall mail to the Division a written report containing the information requested in Part II.A.4 (a) **within five (5) days** after becoming aware of the following circumstances:
 - i) Circumstances leading to any noncompliance which may endanger health or the environment regardless of the cause of the incident;
 - ii) Circumstances leading to any unanticipated bypass which exceeds any effluent limitations in the permit;
 - iii) Circumstances leading to any upset or spill which causes an exceedance of any effluent limitation in the permit;
 - iv) Daily maximum violations for any of the pollutants limited by Part I.A of this permit and specified as requiring 24-hour notification. This includes any toxic pollutant or hazardous substance or any pollutant specifically identified as the method to control any toxic pollutant or hazardous substance.
- c. The permittee shall report instances of non-compliance which are not required to be reported within 24-hours at the time Discharge Monitoring Reports are submitted. The reports shall contain the information listed in sub-paragraph (a) of this section.

5. Other Notification Requirements

Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule in the permit shall be submitted no later than fourteen (14) days following each scheduled date, unless otherwise provided by the Division.

The permittee shall notify the Division, in writing, thirty (30) days in advance of a proposed transfer of permit as provided in Part II.B.3.

The permittee's notification of all anticipated noncompliance does not stay any permit condition.

All existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Division as soon as they know or have reason to believe:

- a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

- i) One hundred micrograms per liter (100 µg/l);
 - ii) Two hundred micrograms per liter (200 µg/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 µg/l) for 2,4-dinitrophenol and 2-methyl-4,6-dinitrophenol; and one milligram per liter (1.0 mg/l) for antimony;
 - iii) Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with Section 61.4(2)(g).
 - iv) The level established by the Division in accordance with 40 C.F.R. § 122.44(f).
- b. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":
- i) Five hundred micrograms per liter (500 µg/l);
 - ii) One milligram per liter (1 mg/l) for antimony; and
 - iii) Ten (10) times the maximum concentration value reported for that pollutant in the permit application.
 - iv) The level established by the Division in accordance with 40 C.F.R. § 122.44(f).

6. Bypass Notification

If the permittee knows in advance of the need for a bypass, a notice shall be submitted, at least ten days before the date of the bypass, to the Division. The bypass shall be subject to Division approval and limitations imposed by the Division. Violations of requirements imposed by the Division will constitute a violation of this permit.

7. Upsets

a. Effect of an Upset

An upset constitutes an affirmative defense to an action brought for noncompliance with permit effluent limitations if the requirements of paragraph (b) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

b. Conditions Necessary for a Demonstration of Upset

A permittee who wishes to establish the affirmative defense of upset shall demonstrate through properly signed contemporaneous operating logs, or other relevant evidence that:

- i) An upset occurred and that the permittee can identify the specific cause(s) of the upset; and
- ii) The permitted facility was at the time being properly operated and maintained; and
- iii) The permittee submitted proper notice of the upset as required in Part II.A.4. of this permit (24-hour notice); and
- iv) The permittee complied with any remedial measure necessary to minimize or prevent any discharge or sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

In addition to the demonstration required above, a permittee who wishes to establish the affirmative defense of upset for a violation of effluent limitations based upon water quality standards shall also demonstrate through monitoring, modeling or other methods that the relevant standards were achieved in the receiving water.

c. Burden of Proof

In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

8. Discharge Point

Any discharge to the waters of the State from a point source other than specifically authorized by this permit is prohibited.

9. Proper Operation and Maintenance

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee as necessary to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by the permittee only when necessary to achieve compliance with the conditions of the permit.

10. Minimization of Adverse Impact

The permittee shall take all reasonable steps to minimize or prevent any discharge of sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment. As necessary, accelerated or additional monitoring to determine the nature and impact of the noncomplying discharge is required.

11. Removed Substances

Solids, sludges, or other pollutants removed in the course of treatment or control of wastewaters shall be disposed in accordance with applicable state and federal regulations.

For all domestic wastewater treatment works, at industrial facilities, the permittee shall dispose of sludge in accordance with all State and Federal regulations.

12. Submission of Incorrect or Incomplete Information

Where the permittee failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or report to the Division, the permittee shall promptly submit the relevant information which was not submitted or any additional information needed to correct any erroneous information previously submitted.

13. Bypass

a. Bypasses are prohibited and the Division may take enforcement action against the permittee for bypass, unless:

- i) The bypass is unavoidable to prevent loss of life, personal injury, or severe property damage;
- ii) There were no feasible alternatives to bypass such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
- iii) Proper notices were submitted in compliance with Part II.A.4.

b. "Severe property damage" as used in this Subsection means substantial physical damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

- c. The permittee may allow a bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance or to assure optimal operation. These bypasses are not subject to the provisions of paragraph (a) above.
- d. The Division may approve an anticipated bypass, after considering adverse effects, if the Division determines that the bypass will meet the conditions specified in paragraph (a) above.

14. Reduction, Loss, or Failure of Treatment Facility

The permittee has the duty to halt or reduce any activity if necessary to maintain compliance with the effluent limitations of the permit. Upon reduction, loss, or failure of the treatment facility, the permittee shall, to the extent necessary to maintain compliance with its permit, control production, control sources of wastewater, or all discharges, until the facility is restored or an alternative method of treatment is provided. This provision also applies to power failures, unless an alternative power source sufficient to operate the wastewater control facilities is provided.

It shall not be a defense for a permittee in an enforcement action that it would be necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

B. RESPONSIBILITIES

1. Inspections and Right to Entry

The permittee shall allow the Division and/or the authorized representative, upon the presentation of credentials:

- a. To enter upon the permittee's premises where a regulated facility or activity is located or in which any records are required to be kept under the terms and conditions of this permit;
- b. At reasonable times to have access to and copy any records required to be kept under the terms and conditions of this permit and to inspect any monitoring equipment or monitoring method required in the permit; and
- c. To enter upon the permittee's premises in a reasonable manner and at a reasonable time to inspect and/or investigate, any actual, suspected, or potential source of water pollution, or to ascertain compliance or non compliance with the Colorado Water Quality Control Act or any other applicable state or federal statute or regulation or any order promulgated by the Division. The investigation may include, but is not limited to, the following: sampling of any discharge and/or process waters, the taking of photographs, interviewing of any person having knowledge related to the discharge permit or alleged violation, access to any and all facilities or areas within the permittee's premises that may have any affect on the discharge, permit, or alleged violation. Such entry is also authorized for the purpose of inspecting and copying records required to be kept concerning any effluent source.
- d. The permittee shall provide access to the Division to sample the discharge at a point after the final treatment process but prior to the discharge mixing with state waters upon presentation of proper credentials.

In the making of such inspections, investigations, and determinations, the Division, insofar as practicable, may designate as its authorized representatives any qualified personnel of the Department of Agriculture. The Division may also request assistance from any other state or local agency or institution.

2. Duty to Provide Information

The permittee shall furnish to the Division, within a reasonable time, any information which the Division may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish to the Division, upon request, copies of records required to be kept by this permit.

3. Transfer of Ownership or Control

- a. Except as provided in paragraph b. of this section, a permit may be transferred by a permittee only if the permit has been modified or revoked and reissued as provided in Section 61.8(8) of the Colorado Discharge Permit System Regulations, to identify the new permittee and to incorporate such other requirements as may be necessary under the Federal Act.
- b. A permit may be automatically transferred to a new permittee if:
 - i) The current permittee notifies the Division in writing 30 days in advance of the proposed transfer date; and
 - ii) The notice includes a written agreement between the existing and new permittee(s) containing a specific date for transfer of permit responsibility, coverage and liability between them; and
 - iii) The Division does not notify the existing permittee and the proposed new permittee of its intent to modify, or revoke and reissue the permit.
 - iv) Fee requirements of the Colorado Discharge Permit System Regulations, Section 61.15, have been met.

4. Availability of Reports

Except for data determined to be confidential under Section 308 of the Federal Clean Water Act and the Colorado Discharge Permit System Regulations 5 CCR 1002-61, Section 61.5(4), all reports prepared in accordance with the terms of this permit shall be available for public inspection at the offices of the Division and the Environmental Protection Agency.

The name and address of the permit applicant(s) and permittee(s), permit applications, permits and effluent data shall not be considered confidential. Knowingly making false statement on any such report may result in the imposition of criminal penalties as provided for in Section 309 of the Federal Clean Water Act, and Section 25-8-610 C.R.S.

5. Modification, Suspension, Revocation, or Termination of Permits By the Division

The filing of a request by the permittee for a permit modification, revocation and reissuance, termination or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

- a. A permit may be modified, suspended, or terminated in whole or in part during its term for reasons determined by the Division including, but not limited to, the following:
 - i) Violation of any terms or conditions of the permit;
 - ii) Obtaining a permit by misrepresentation or failing to disclose any fact which is material to the granting or denial of a permit or to the establishment of terms or conditions of the permit; or
 - iii) Materially false or inaccurate statements or information in the permit application or the permit.
 - iv) A determination that the permitted activity endangers human health or the classified or existing uses of state waters and can only be regulated to acceptable levels by permit modifications or termination.
- b. A permit may be modified in whole or in part for the following causes, provided that such modification complies with the provisions of Section 61.10 of the Colorado Discharge Permit System Regulations:
 - i) There are material and substantial alterations or additions to the permitted facility or activity which occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit.
 - ii) The Division has received new information which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of different permit conditions at the time of issuance. For permits issued to new sources or new dischargers, this cause includes information derived from effluent testing required under Section 61.4(7)(e) of the Colorado Discharge Permit System Regulations. This provision allows a modification of the permit to include conditions that are less stringent

than the existing permit only to the extent allowed under Section 61.10 of the Colorado Discharge Permit System Regulations.

- iii) The standards or regulations on which the permit was based have been changed by promulgation of amended standards or regulations or by judicial decision after the permit was issued. Permits may be modified during their terms for this cause only as follows:
 - (A) The permit condition requested to be modified was based on a promulgated effluent limitation guideline, EPA approved water quality standard, or an effluent limitation set forth in 5 CCR 1002-62, § 62 et seq.; and
 - (B) EPA has revised, withdrawn, or modified that portion of the regulation or effluent limitation guideline on which the permit condition was based, or has approved a Commission action with respect to the water quality standard or effluent limitation on which the permit condition was based; and
 - (C) The permittee requests modification after the notice of final action by which the EPA effluent limitation guideline, water quality standard, or effluent limitation is revised, withdrawn, or modified; or
 - (D) For judicial decisions, a court of competent jurisdiction has remanded and stayed EPA promulgated regulations or effluent limitation guidelines, if the remand and stay concern that portion of the regulations or guidelines on which the permit condition was based and a request is filed by the permittee in accordance with this Regulation, within ninety (90) days of judicial remand.
 - iv) The Division determines that good cause exists to modify a permit condition because of events over which the permittee has no control and for which there is no reasonable available remedy.
 - v) The permittee has received a variance.
 - vi) When required to incorporate applicable toxic effluent limitation or standards adopted pursuant to § 307(a) of the Federal act.
 - vii) When required by the reopener conditions in the permit.
 - viii) As necessary under 40 C.F.R. 403.8(e), to include a compliance schedule for the development of a pretreatment program.
 - ix) When the level of discharge of any pollutant which is not limited in the permit exceeds the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under Section 61.8(2) of the Colorado Discharge Permit System Regulations.
 - x) To establish a pollutant notification level required in Section 61.8(5) of the Colorado Discharge Permit System Regulations.
 - xi) To correct technical mistakes, such as errors in calculation, or mistaken interpretations of law made in determining permit conditions, to the extent allowed in Section 61.10 of the Colorado State Discharge Permit System Regulations.
 - xii) When required by a permit condition to incorporate a land application plan for beneficial reuse of sewage sludge, to revise an existing land application plan, or to add a land application plan.
 - xiii) For any other cause provided in Section 61.10 of the Colorado Discharge Permit System Regulations.
- c. At the request of a permittee, the Division may modify or terminate a permit and issue a new permit if the following conditions are met:
- i) The Regional Administrator has been notified of the proposed modification or termination and does not object in writing within thirty (30) days of receipt of notification,
 - ii) The Division finds that the permittee has shown reasonable grounds consistent with the Federal and State statutes and regulations for such modifications or termination;

- iii) Requirements of Section 61.15 of the Colorado Discharge Permit System Regulations have been met, and
- iv) Requirements of public notice have been met.

- d. Permit modification (except for minor modifications), termination or revocation and reissuance actions shall be subject to the requirements of Sections 61.5(2), 61.5(3), 61.6, 61.7 and 61.15 of the Colorado Discharge Permit System Regulations. The Division shall act on a permit modification request, other than minor modification requests, within 180 days of receipt thereof. Except for minor modifications, the terms of the existing permit govern and are enforceable until the newly issued permit is formally modified or revoked and reissued following public notice.
- e. Upon consent by the permittee, the Division may make minor permit modifications without following the requirements of Sections 61.5(2), 61.5(3), 61.7, and 61.15 of the Colorado Discharge Permit System Regulations. Minor modifications to permits are limited to:
 - i) Correcting typographical errors; or
 - ii) Increasing the frequency of monitoring or reporting by the permittee; or
 - iii) Changing an interim date in a schedule of compliance, provided the new date of compliance is not more than 120 days after the date specific in the existing permit and does not interfere with attainment of the final compliance date requirement; or
 - iv) Allowing for a transfer in ownership or operational control of a facility where the Division determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new permittees has been submitted to the Division; or
 - v) Changing the construction schedule for a discharger which is a new source, but no such change shall affect a discharger's obligation to have all pollution control equipment installed and in operation prior to discharge; or
 - vi) Deleting a point source outfall when the discharge from that outfall is terminated and does not result in discharge of pollutants from other outfalls except in accordance with permit limits.
- f. When a permit is modified, only the conditions subject to modification are reopened. If a permit is revoked and reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term.
- g. The filing of a request by the permittee for a permit modification, revocation and reissuance or termination does not stay any permit condition.
- h. All permit modifications and reissuances are subject to the antibacksliding provisions set forth in 61.10(e) through (g).

6. Oil and Hazardous Substance Liability

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee is or may be subject to under Section 311 (Oil and Hazardous Substance Liability) of the Clean Water Act.

7. State Laws

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law or regulation under authority granted by Section 510 of the Clean Water Act. Nothing in this permit shall be construed to prevent or limit application of any emergency power of the division.

8. Permit Violations

Failure to comply with any terms and/or conditions of this permit shall be a violation of this permit. The discharge of any pollutant identified in this permit more frequently than or at a level in excess of that authorized shall constitute a violation of

the permit. Except as provided in Part I.D and Part II.A or B, nothing in this permit shall be construed to relieve the permittee from civil or criminal penalties for noncompliance (See 40 CFR 122.41).

9. Property Rights

The issuance of this permit does not convey any property or water rights in either real or personal property, or stream flows, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

10. Severability

The provisions of this permit are severable. If any provisions of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances and the application of the remainder of this permit shall not be affected.

11. Renewal Application

If the permittee desires to continue to discharge, a permit renewal application shall be submitted at least one hundred eighty (180) days before this permit expires. If the permittee anticipates there will be no discharge after the expiration date of this permit, the Division should be promptly notified so that it can terminate the permit in accordance with Part II.B.5.

12. Confidentiality

Any information relating to any secret process, method of manufacture or production, or sales or marketing data which has been declared confidential by the permittee, and which may be acquired, ascertained, or discovered, whether in any sampling investigation, emergency investigation, or otherwise, shall not be publicly disclosed by any member, officer, or employee of the Commission or the Division, but shall be kept confidential. Any person seeking to invoke the protection of this Subsection (12) shall bear the burden of proving its applicability. This section shall never be interpreted as preventing full disclosure of effluent data.

13. Fees

The permittee is required to submit payment of an annual fee as set forth in the 2005 amendments to the Water Quality Control Act. Section 25-8-502 (l) (b), and the Colorado Discharge Permit System Regulations 5 CCR 1002-61, Section 61.15 as amended. Failure to submit the required fee when due and payable is a violation of the permit and will result in enforcement action pursuant to Section 25-8-601 et. seq., C.R.S. 1973 as amended.

14. Duration of Permit

The duration of a permit shall be for a fixed term and shall not exceed five (5) years. Filing of a timely and complete application shall cause the expired permit to continue in force to the effective date of the new permit. The permit's duration may be extended only through administrative extensions and not through interim modifications.

15. Section 307 Toxics

If a toxic effluent standard or prohibition, including any applicable schedule of compliance specified, is established by regulation pursuant to Section 307 of the Federal Act for a toxic pollutant which is present in the permittee's discharge and such standard or prohibition is more stringent than any limitation upon such pollutant in the discharge permit, the Division shall institute proceedings to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition.

16. Effect of Permit Issuance

a. The issuance of a permit does not convey any property rights or any exclusive privilege.

- b. The issuance of a permit does not authorize any injury to person or property or any invasion of personal rights, nor does it authorize the infringement of federal, state, or local laws or regulations.
- c. Except for any toxic effluent standard or prohibition imposed under Section 307 of the Federal act or any standard for sewage sludge use or disposal under Section 405(d) of the Federal act, compliance with a permit during its term constitutes compliance, for purposes of enforcement, with Sections 301, 302, 306, 318, 403, and 405(a) and (b) of the Federal act. However, a permit may be modified, revoked and reissued, or terminated during its term for cause as set forth in Section 61.8(8) of the Colorado Discharge Permit System Regulations.
- d. Compliance with a permit condition which implements a particular standard for sewage sludge use or disposal shall be an affirmative defense in any enforcement action brought for a violation of that standard for sewage sludge use or disposal.

PART III

CATEGORICAL INDUSTRIES

Aluminum Forming	Meat Products
Asbestos Manufacturing	Metal Finishing
Battery Manufacturing	Metal Molding and Casting (Foundries)
Builders' Paper and Board Mills	Mineral Mining and Processing
Canned & Preserved Fruits and Vegetables Processing	Nonferrous Metals Manufacturing
Canned & Preserved Seafood Processing	Nonferrous Metals Forming and Metal Powders
Carbon Black Manufacturing	Oil and Gas Extraction
Cement Manufacturing	Organic Chemicals, Plastics, and Synthetic Fibers
Coal Mining	Ore Mining and Dressing
Coil Coating	Paint Formulation
Copper Forming	Paving and Roofing Materials (Tars and Asphalt)
Dairy Products Processing	Pesticide Chemicals
Electrical and Electronic Components	Petroleum Refining
Electroplating	Pharmaceutical Manufacturing
Explosives Manufacturing	Phosphate Manufacturing
Feedlots	Photographic

TOXIC POLLUTANTS AND HAZARDOUS SUBSTANCES
REQUIRED TO BE IDENTIFIED BY EXISTING DISCHARGERS
IF EXPECTED TO BE PRESENT

Toxic Pollutants

Asbestos

Hazardous Substances

Acetaldehyde	Isoprene
Allyl alcohol	Isopropanolamine
Allyl chloride	Keithane
Amyl acetate	Kepone
Aniline	Malathion
Benzonitrile	Mercaptodimethur
Benzyl chloride	Methoxychlor
Butyl acetate	Methyl mercaptan
Butylamine	Methyl methacrylate
Captan	Methyl parathion
Carbaryl	Mexacarbate
Carbofuran	Monoethyl amine
Carbon disulfide	Monomethyl amine
Chlorpyrifos	Naled
Coumaphos	Napthenic acid
Cresol	Nitrotoluene
Crotonaldehyde	Parathion
Cyclohexane	Phenolsulfanate
2,4-D(2,4-Dichlorophenoxy acetic acid)	Phosgene
Diazinon	Propargite
Dicamba	Propylene oxide
Dichlobenil	Pyrethrins
Dichlone	Quinoline
2,2-Dichloropropionic acid	Resorcinol
Dichlorvos	Strontium
Diethyl amine	Strychnine
Dimethyl amine	Styrene
Dinitrobenzene	TDE (Tetrachlorodiphenylethane)
Diquat	2,4,5-T (2,4,5-Trichlorophenoxy acetic acid)
Disulfoton	2,4,5-TP [2-(2,4,5-Trichlorophenoxy) propanoic acid]
Diuron	Trichlorofan
Epichlorohydrin	Triethylamine
Ethanolamine	Trimethylamine
Ethion	Uranium
Ethylene diamine	Vandium
Ethylene dibromide	Vinyl Acetate
Formaldehyde	Xylene
Furfural	Xylenol
Guthion	Zirconium
